Education

Bachelor of Technology

Aditya College of Engineering

2020 - 2024

- Electronics and communication Engineering

Skills

Languages: Python

Skills : GenAI, RAG, LangChain, FAISS, OpenAI API, Groq API, Problem Solving, GitHub.

Professional Experience

CLOUDRICK SOFTWARE SOLUTIONS

Hyderabad

Software Engineer

Sept 2024 – Present

- Designed and deployed **production-ready Generative AI applications** using **Python, LangChain, LangGraph, FastAPI, and Large Language Models (LLMs)** for enterprise knowledge automation and intelligent document processing.
- Architected end-to-end **Retrieval-Augmented Generation (RAG)** pipelines by implementing document ingestion, intelligent chunking, embedding generation, **FAISS** vector search, and context-aware response generation.
- Developed **AI assistants and conversational agents** with multi-turn conversations, document-based question answering, conversation memory, and LangGraph-based workflow orchestration.
- Integrated **OpenAI, Groq, and Hugging Face** models through LangChain, enabling scalable AI solutions with optimized latency, model flexibility, and cost-efficient inference.
- Optimized **prompt engineering, retrieval strategies, embedding models, and chunking techniques** to improve response accuracy, semantic search relevance, and reduce LLM hallucinations.

Project

Enterprise AI Research & Knowledge Assistant

- Developed a production-style AI knowledge assistant using **Python, LangChain, LangGraph, FastAPI, and RAG** for intelligent document-based question answering.
- Implemented a complete **RAG pipeline** including document loading, text chunking, embedding generation, semantic search, and context-aware response generation.
- Developed **LangGraph workflows** to orchestrate document retrieval, conversation memory, and **structured response** generation.
- Integrated semantic search using FAISS and embedding models to retrieve relevant document chunks with source references.
- Implemented conversation **memory** to enable context-aware, multi-turn interactions across user sessions.
- Implemented structured outputs using **Pydantic models** to return consistent, validated **JSON responses**.

Extra-Curricular Activities

- 3 star and solved 500+ complex coding challenges on **Leetcode**.
- **Opening GitHub issues** in third-party libraries to learn more about the performance and the issue.
- Exploring new technologies and frameworks.
